Podložna tečnost za staklo (UV Primer) je specijalizovano hemijsko sredstvo koje služi kao **adhezioni most** između površine materijala i UV mastila. To je ključni element procesa UV štampe na zahtevnim podlogama.

Uklanja problem slabe adhezije mastila na glatkom staklu. Poboljšava **trajnost i otpornost** otiska na pranje i vlagu.
