Podložna tečnost za akril (UV Primer) je specijalizovano hemijsko sredstvo koje služi kao **adhezioni most** između površine materijala i UV mastila. To je ključni element procesa UV štampe na zahtevnim podlogama.

Ojačava vezu mastila sa sintetičkim površinama, povećavajući **elastičnost i otpornost** na ogrebotine, što je od velike važnosti u proizvodnji suvenira i tabli.
